Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). Index Data (Source : Amundi)

Description of the Index

The Index is an equity index based on the MSCI EMU Index (the "Parent Index") representative of the large and mid-cap securities across developed European Economic and Monetary Union ("EMU") countries. The Index excludes companies whose products have negative social or environmental impacts, while overweighting companies with strong ESG Score. Additionally, the Index aims to represent the performance of a strategy that reweights securities based upon the opportunities and risks associated with the climate transition to meet the EU Climate Transition Benchmark ("EU CTB") regulation minimum requirements.

Carbon footprint

Carbon footprint: carbon emissions per euro million invested

Carbon footprint

This indicator measures the portfolio's carbon emissions in metric tonnes of carbon equivalent (tCO2e) per euro million invested. This is an indicator of the emissions generated by investment in this portfolio.

Definition of scopes :

- **Scope 1** : all emissions that arise directly from sources that are owned or controlled by the company.
- **Scope 2** : all indirect emissions generated by the purchase or production of electricity, steam or heat.
- **Scope 3** : All other indirect emissions, upstream and downstream of the value chain. For reasons of data robustness, Amundi has chosen to use emissions from activities upstream of Scope 3 - Source: Trucost EEI-O model (input/output model extended to the Trucost environment).

Source : The carbon emissions data is supplied by Trucost. It corresponds to companies' annual emissions expressed in tCO2e, which covers the six greenhouse gases defined in the Kyoto protocol whose emissions are converted into global warming potential (GWP) in CO2 equivalent.
