### Risk indicators (Source: Fund Admin)

Portfolio volatility	13.33%	-	15.18%
Benchmark volatility	13.39%	-	15.28%
Ex-post Tracking Error	0.13%	-	0.15%

\* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Index Data (Source : Amundi)

Description of the Index

The Index is an equity index based on the MSCI World IMI Index, representative of the large, mid and small cap stocks across developed markets countries (the "Parent Index").

The Index is designed to represent the performance of a strategy that seeks to maximize the exposure to the value factor (i.e. stocks considered to be inexpensive relative to others due to their fundamental value) while systematically integrating environmental, social and governance ("ESG") characteristics, as further described in Annex 1 – ESG Related Disclosures to the Sub-Fund's prospectus.

The Index is constructed by selecting constituents of a market capitalization weighted index and applying an optimization process that aims to maximize the exposure to a value factor, reduce the carbon-equivalent exposure to CO2 and other greenhouse gases ("GHG") by thirty percent (30%) and improve the weighted-average industry-adjusted ESG score of the Index with respect to its Parent Index.

The Index is a net total return index, meaning that dividends net of tax paid by the index constituents are included in the Index return.
