Objective and Investment Policy

The Sub-Fund is an index-tracking UCITS passively managed. The objective of this Sub-Fund is to track the performance of the MDAX ESG+ (NR) EUR Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index. The anticipated level of the tracking error, under normal market conditions, is indicated in the prospectus of the Sub-Fund. The Index is a Net Total Return Index: dividends net of tax paid by the Index constituents are included in the Index return. The Sub-Fund promotes environmental and/or social characteristics through among others, replicating an Index integrating an environmental, social and governance ("ESG") rating. The Index is an equity index based on the MDAX Index (the "Parent Index") representative of medium capitalization companies (mid-caps) in Germany from traditional sectors, including media, chemical, industry, and financial services and technology that follow the companies included in the DAX in terms of market capitalization and order book turnover. The Index excludes companies whose products have negative social or environmental impacts, while overweighting companies with strong ESG Score. The Index methodology is constructed using a "Best-in-class approach": best ranked companies are selected to construct the Index. "Best-in-class" is an approach where leading or best-performing investments are selected within a universe, industry sector or class. It excludes companies falling behind on an ESG level, particularly on the basis of ESG ratings. Using such Best-in-class approach, the Index follows an extra-financial approach significantly engaging that permits the reduction by at least 20% of the initial investment universe (expressed in number of issuers). The ESG key issues include for instance, but are not limited to, water stress, carbon emissions, labor management or business ethics. The limits of the approach adopted are described in the Sub-Fund's prospectus through risk factors such as Sustainable investment risk. The ESG score of companies is calculated by an ESG rating agency, using raw data, models and estimates collected/calculated using methods specific to each provider. Due to the lack of standardisation and the uniqueness of each methodology, the information provided may be incomplete. Assessment of sustainability risks is complex and may be based on ESG data which is difficult to obtain, incomplete, estimated, out of date and/or otherwise materially inaccurate. Even when identified, there can be no guarantee that these data will be correctly assessed. The Index applies exclusions to companies involved in activities considered non-aligned with the Paris Climate Agreement (coal extraction, oil, etc.). For further information on the exclusions applied by the Index pursuant to the EU Paris-aligned Benchmarks (PAB), please refer to the "Guidelines on funds' names using ESG or sustainability-related terms" section of the Prospectus. More information about the composition of the Index and its operating rules are available in the prospectus and at: www.stoxx.com The Index value is available via Bloomberg (MDXESGPN). The exposure to the Index will be achieved through a direct replication, mainly by making direct investments in transferable securities and/or other eligible assets representing the Index constituents in a proportion extremely close to their proportion in the index. The Investment Manager will be able to use derivatives in order to deal with inflows and outflows and also if it allows a better exposition to an Index constituent. In order to generate additional income to offset its costs, the Sub-Fund may also enter into securities lending operations.

Performances from 30/09/2016 to 30/09/2026 (Source : Fund Admin)

Risk indicators (Source: Fund Admin)

	1 year	3 years	Inception to date *
Portfolio volatility *	18.01%	17.31%	18.57%
Benchmark volatility	18.05%	17.33%	18.54%
Ex-post Tracking Error	0.11%	0.10%	0.43%
Sharpe ratio	0.33	0.11	0.22

* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

EQUITY ■

Risk & Reward Profile (SRRI) (Source: Fund Admin)

Lower risk, potentially lower rewards
Higher risk, potentially higher rewards

The SRRI represents the risk and return profile as presented in the Key Investor Information Document (KIID). The lowest category does not imply that there is no risk. The SRRI is not guaranteed and may change over time.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances. This product does not include any protection from future market performance so you could lose some or all of your investment. Beside the risks included in the risk indicator, other risks may affect the Sub-Fund's performance. Please refer to the Amundi Index Solutions prospectus.
